Fancy Prizes for Coins.

Some unusually high figures were obtained for rare coins at a sale held last Thursday in New York, under the auspices of Mason & Co., of Philadelphia. A silver dollar of 1791 brought $45, and the same price was obtained for one of 1838. A dollar of 1839 fetched $45; 1859, $40. In half dollars the prices realized were 1790, $38.50; 1797, $34.50; 1815, $14. Quarter dollar, 1790, $12; a dime of 1804 brought $24; a half dime of 1802, $0.50; one of 1805, $24; a proof set of 1851, $12. Of the half cents sold one of the coinage of 1800 brought $20.50, while others were sold at from $2.25 to $1.12 each. Among the Confederate States pieces a copper cent of 1861 went for $6.50, a half-dollar for $6, and a C. S. A. great seal for $3.50. A silver medal of Jefferson Davis was valued at just $3.50. Ten thousand of American and foreign coins and medals, gold, silver and copper, ancient and modern, were disposed of at the sale.

To be Shortened Forty Miles.

The Altoona Tribune states that the record of lengthening the track of the Pennsylvania Railroad Company will be continued until the distance between Philadelphia and Pittsburg will be shortened forty miles.

For Syphilis, or Venereal Disease, and for Mercurial Disease, which is sometimes complicated with it, the Sarasaarilla must be taken for a long time and in large doses with each meal. After taking it for a month, twenty drops or six weeks, then substitute for a month, twenty drops of Tincture of the Mercur. On three times a day in half a glass of water. Thus alternate these two remedies until the disorder is expelled from the system.

To Tell a Missing Figure.—Here is a little trick with figures, that is very puzzling until one knows how it is done, and after one knows it, that it should be so is not the less puzzling. Ask another to put down several figures to make a high number. Suppose 1827345. Tell him to add these figures, which, in this case, will give 56. Then subtract this sum from the figure 1827345, giving 1827289. All this while you have not seen the figures. Tell him to subtract one of these figures, add up what are left, and name the amount, and you will at once tell him what figure he erases. Suppose he erases the figure 7—the remainder added together makes 29. The difference between this figure and the multiple of 9 that is next higher, will give you the numeral crossed out. The next multiple of 9 to the given figure 29 is 36—and the difference between 29 and 36 is the numeral removed.

Burkholder's Bell.—Fifty-nine persons of the Springville tobacco houses and vicinity sent their contributions to the "New Era" for the Bell Fund, along with it came the following piece of German Poetry, which is full of meaning and truths:

Die Bell, der Mund und's Seul.
Die bell, der mund, und's seul——
Die schutz ne grog ze jacht.
Wann sie ned bell und's seul.
So wird sie niud gelacht.
Das seul ze bell schomken.
Es is clean auch kein arg.
Der hand wird auch gast freu.
Da ist gar kein gebahr.
Das seul braucht kein struimp.
Der mund beif kloren hau.
So wird man der friezen sein.
Und fassen frechen waske.

Seven tobacconists from Springville have also forwarded contributions, who are friends of Burkholder and his new prison music, wish to help pay for the bell, "the sound of which the bosses don't like, but we do."

Uncle Sam's Coating for Outside Walls: The following coating for rough brick walls is used by the U. S. Government for painting light houses, and it effectively prevents moisture from striking through:

Take of fresh Rosendorn cement three parts, and of clean, fine sand, one part; mix with fresh water thoroughly. This gives a gray or granite color, dark or light, according to the color of the cement. If brick color is desired, add enough Venetian red to the mixture to produce the color. If a very light color is desired, lime may be used with the cement and sand. Care must be taken to have all the ingredients well mixed together. In applying the wash, the wall must be wet with clean fresh water; then follow immediately with the cement wash. This prevents the bricks from absorbing the water from the wash too rapidly, and gives time for the cement to set. The wash must be well stirred during the application. The mixture is to be made as thick as can be applied conveniently with a whitewash brush. It is admirably suited for brickwork, fences, etc.; but it cannot be used to advantage over paint or white wash.
